## Welcome to the Official USA Meta tags Website

### Why some websites are No. 1 and why some will never be found.

Over 80% of all people use search engines to find information on the internet. About 60% of them use the search engine Google. Hardly anyone knows your internet domain name but often they do know the business you are in.

Every day new internet techniques are introduced. So many that it's hard to keep up. Meta tags are a "traditional" technique and have already been in use for a long time.

In SEO (Search Engine Optimization) meta tags still play an important role. Especially the use of the meta description is very important. This tag is shown by search engines as a small text item in the search results. Make sure that the meta tags on your website are unique for each and every page and try to make them as attractive as possible. Both a relevant title tag and the description tag will have to persuade a visitor to click on the link in the search results.

Research shows that only 20% of all web pages contain these important meta tags in their HTML and over 85% of these websites are unfit to be submitted to the search engines. Here we help you make good meta tags so that your site is found on the internet, as high in the search results as possible.

### How to get your site ranked higher !

But what if your site is not fully prepared for submission and what if you don't use any meta tags? How will people be able to find your website on the internet? Is your website not optimized to submit to the search engines?

**Than it's time for a change!** Get the most out of your meta tags.
